AMENDMENTS TO THE SPECIFICATION:

Please replace paragraph 0024, on page 7 of the specification, with the following amended paragraph:

In the illustrated example, development module 12' uses stylesheet parser 13' such as the commercially available XSLT parser to generate source code 14' in Java for a particular type of message. Java source code 14' is a *.java file. A Java compiler 16' such as the compiler in the commercially available Java Development Kit (JDK) compiles the Java source code 14' to obtain compiled Java code 18'. The compiled Java code 18' is a *.class file and is used by message parser 20' to transform messages [[22]] 22' between Java and the OLTP language.
